利用CMake在Windows環境下快速建立 OpenCV專案

By Jacky Liu 27 Dec 2016

在windows下開新的OpenCV專案每次都要手動設定dll、lib等等相關路徑,懶人如我,設定兩次後就不耐煩了,到底有沒有更快的方式,快速建立專案?而解方就是使用CMake

環境

- Microsoft Windows 10
- Visual studio 2015
- OpenCV 3.2
 - 。 安裝路徑: c:\opencv
- Cmake 3.7.1

步驟

- 1. 建立專案資料夾example
- 2. 在example資料夾中建立OpenCV程式碼文件 DisplayImage.cpp

```
#include <stdio.h>
#include <opencv2/opencv.hpp>

using namespace cv;

int main(int argc, char** argv )
{
    if ( argc != 2 )
    {
        printf("usage: DisplayImage.out <Image_Path>\n");
        return -1;
    }

Mat image;
    image = imread( argv[1], 1 );
```

```
if ( !image.data )
{
    printf("No image data \n");
    return -1;
}
namedWindow("Display Image", WINDOW_AUTOSIZE );
imshow("Display Image", image);
waitKey(0);
return 0;
}
```

3. 在example資料夾中建立CMakeLists.txt

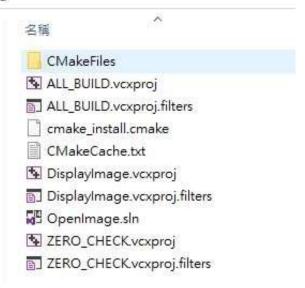

```
cmake_minimum_required(VERSION 2.8)
project(OpenImage)
   MACRO(MY_DEFINE_EXAMPLE name srcs)
       add_executable(${name} ${srcs})
       # 設定 include path
       include directories("."
       "C:\\opencv\\build\\include"
       "C:\\opencv\\build\\include\\opencv"
        "C:\\opencv\\build\\include\\opencv2")
       # 設定 library path (自己編譯出來的 OpenCV library 位置)
       set(MYLIBPATH "C:\\opencv\\build\\x64\\vc14\\lib\\")
       target_link_libraries(${name} ${MYLIBPATH}opencv_world320d.lib)
      # 使用 Unicode
       add definitions(-DUNICODE -D_UNICODE)
   ENDMACRO(MY_DEFINE_EXAMPLE)
   MY_DEFINE_EXAMPLE(DisplayImage
                                      DisplayImage.cpp)
```

4. 在Command-line中cd至example資料夾下(安裝cmake時需將cmake加到path中)

```
cd example
mkdir build
cd build
cmake.exe -G "Visual Studio 14 2015 Win64" ..
```

```
MINGW64:/c/Users/jjkka/Desktop/example/build
                                                                                                     ×
                                                                                            Building for: Visual Studio 14 2015
The C compiler identification is MSVC 19.0.24215.1
-- The CXX compiler identification is MSVC 19.0.24215.1

   Generating done
Build files have been written to: C:/Users/jjkka/Desktop/example/build
  kka132@MODERN MINGW64 ~/Desktop/example/build
```

5. 在build資料夾中應出現以下檔案,開啟OpenImage.sIn並對"DisplayImage"按下右鍵編譯build

- 6. 編譯成功後在 example/build/Debug 中會出現 DisplayImage.exe
- 7. 複製 opencv_world320d.dll 與 lena.jpg 至同資料夾中
- 8. 用以下指令執行 DisplayImage.exe

```
./DisplayImage.exe lena.jpg
```

9. 執行結果如下
